

Atman Firewall

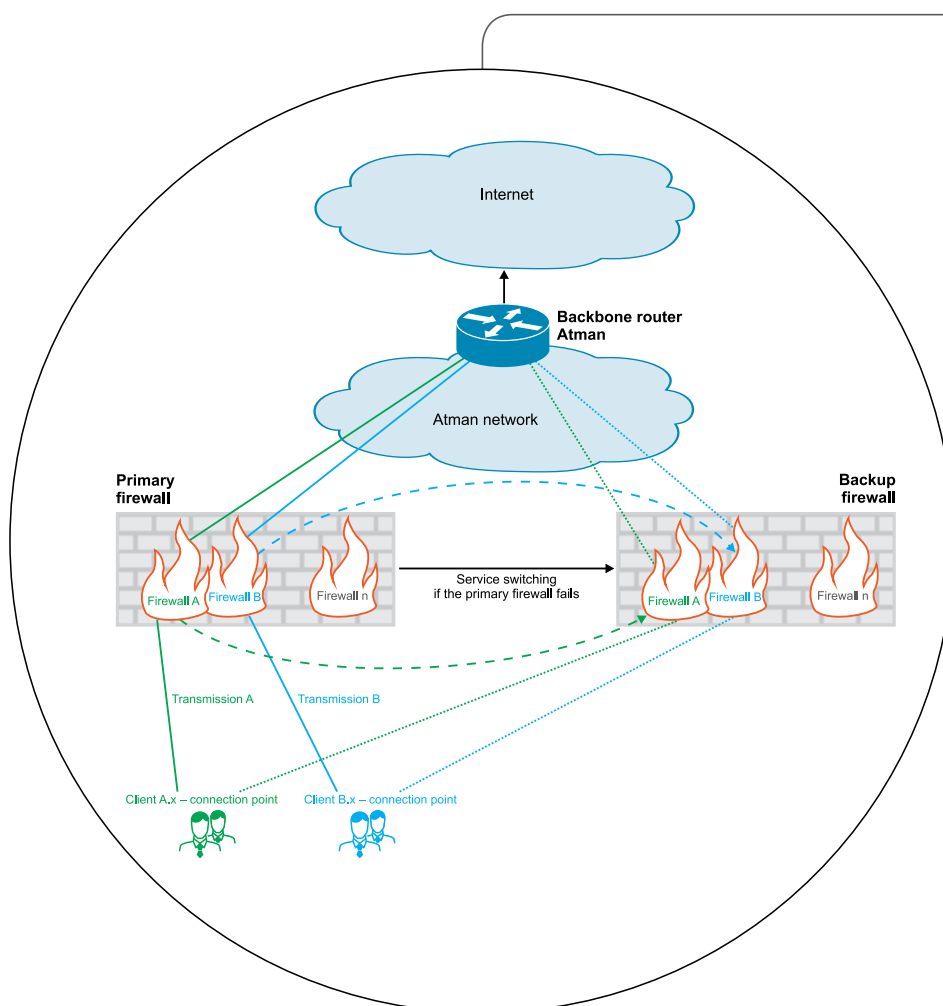

Comprehensive protection of the client IT infrastructure, based on modern UTM solutions

Businesses are nowadays exposed to an increasing number of ever more advanced Internet attacks. With Internet threats developing so dynamically, it is essential to ensure network protection and management.

In response to that, Atman is offering Atman Firewall, a service based on advanced UTM systems (Unified Threat Management) installed within Atman infrastructure. With this model of protection, businesses enjoy a complete protection of their network with untrusted Internet networks at no cost related to the purchase and maintenance of their own protection systems.

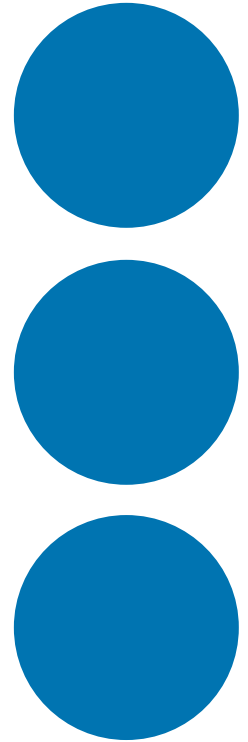

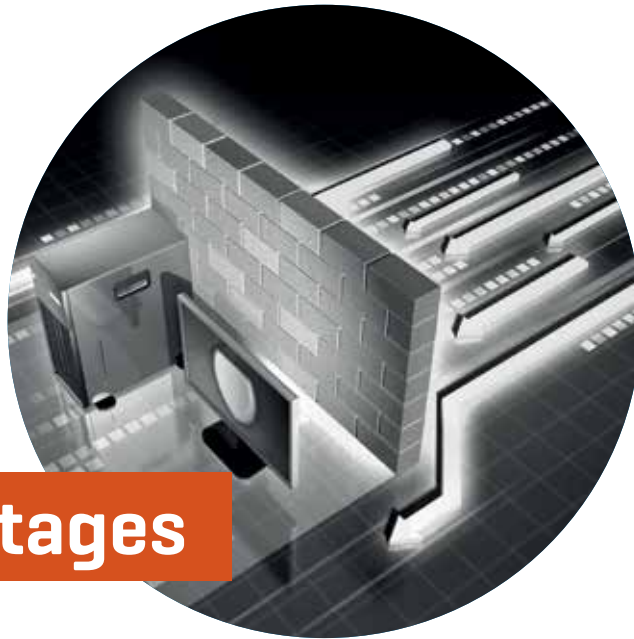

Working principle

The Atman Firewall service is based on a pair of clustered Fortinet FortiGate appliances – a primary firewall, and a backup firewall that takes over the traffic control when the first one is unavailable.

Both firewalls receive the primary Internet access service, as provided to the client, from one side, and the data transmission between the firewall and the client's infrastructure, from the other. The entire traffic incoming to and outgoing from the client's infrastructure is thus filtered by the firewall.

The client can also use a web-based administrator panel that provides for previewing the status, logs, reports and current setup of the firewall.

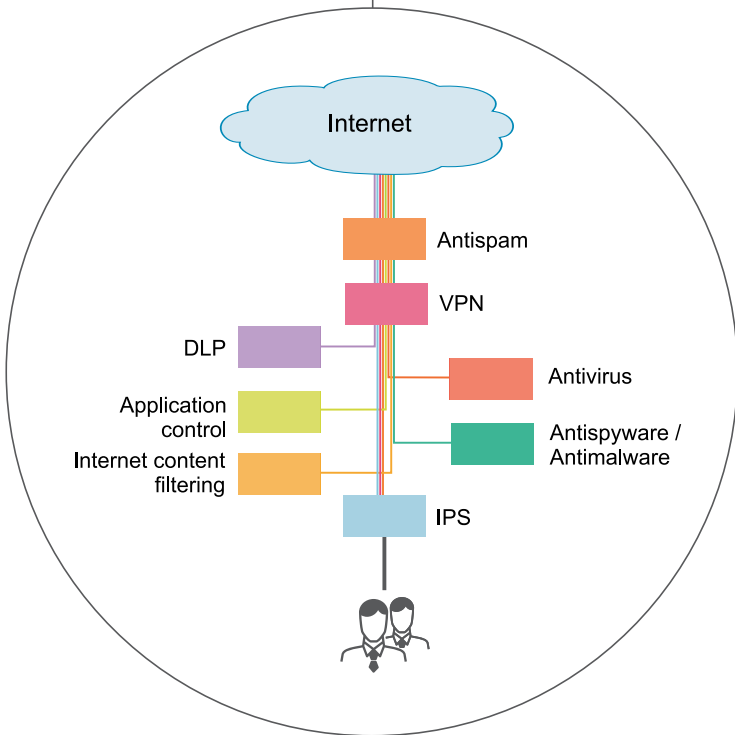

Advantages

- 1 | UTM (Unified Threat Management) – modern network security solutions**
 - Class of network appliances providing complete and versatile protection
 - High efficiency and availability solutions
- 2 | Comprehensive and professional IT infrastructure security**
 - Protection against various types of hacking, attacks, viruses and spam
 - A range of additional functions (including, but not limited to, data leak protection – DLP, application control)
- 3 | Highest quality and availability of service**
 - Support from qualified Atman specialists
 - Support at implementation and maintenance stages
- 4 | Time and money savings**
 - No capital expenditures on the client's part
 - Fixed subscription fee
- 5 | Fast configuration to the client's current needs**
 - Experienced specialists with expertise in advanced firewall configuration
- 6 | Physical access security**
 - A solution installed in a secure and professional data center
 - Authorized access only
- 7 | Peace of mind**
 - Advantages bought by outsourcing
 - Reports received 24/7

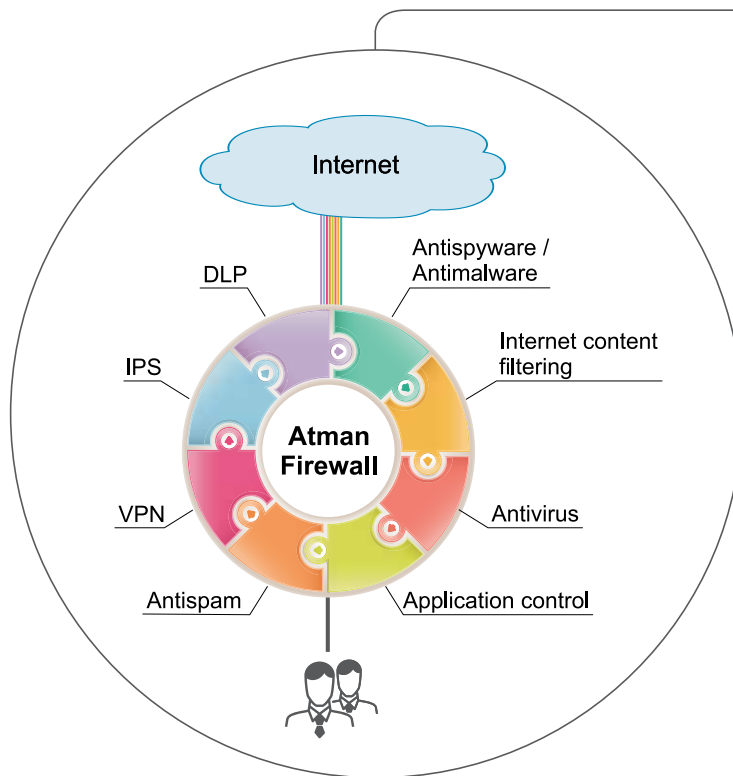

The past

Distributed, costly solutions

The future

Consolidated, efficient solutions
